

Linear Forest

Marlin

2023-06-15

placeholder

This vignette seeks to cover different methods for dhs analysis

```
#form <- conf_case ~ N1 + N2 / . - N1 - N2

#forest_model <- random_linear_forest(data = na.roughfix(train_df),
#                                     num_tree = 100,
#                                     model_formula = form,
#                                     max_depth = Inf,
#                                     verbose = TRUE)
```

These functions are used in this analysis Random Linear Forst
