placeholder

This vignette seeks to cover different methods for dhs analysis

```r
form <- conf_case ~ N1 + N2 | . - N1 - N2

#forest_model <- random_linear_forest(data = randomForest::na.roughfix(model_data),
#                                      num_tree = 100,
#                                      model_formula = form,
#                                      max_depth = Inf,
#                                      verbose = TRUE)
```

These functions are used in this analysis Random Linear Forst
